OPERATING INSTRUCTIONS

For user

To use this unit correctly and safely, be sure to read these operating instructions before use.
Meanings of symbols displayed on indoor unit and/or outdoor unit

**WARNING** (Risk of fire) This unit uses a flammable refrigerant. If refrigerant leaks and comes in contact with fire or heating part, it will create harmful gas and there is risk of fire.

Read the OPERATING INSTRUCTIONS carefully before operation.

Service personnel are required to carefully read the OPERATING INSTRUCTIONS and INSTALLATION MANUAL before operation.

Further information is available in the OPERATING INSTRUCTIONS, INSTALLATION MANUAL, and the like.

- Since rotating parts and parts which could cause an electric shock are used in this product, be sure to read these “Safety Precautions” before use.
- Since the cautionary items shown here are important for safety, be sure to observe them.
- After reading this manual, keep it together with the installation manual in a handy place for easy reference.
- Be sure to receive a guarantee card from your dealer and check that the purchased data and shop name, etc. are entered correctly.

**Marks and their meanings**

- **WARNING**: Incorrect handling could cause serious hazard, such as death, serious injury, etc. with a high probability.
- **CAUTION**: Incorrect handling could cause serious hazard depending on the conditions.

**WARNING**

Do not connect the power cord to an intermediate point, use an extension cord, or connect multiple devices to a single AC outlet.
- This may cause overheating, fire, or electric shock.

Make sure the power plug is free of dirt and insert it securely into the outlet.
- A dirty plug may cause fire or electric shock.

Do not bundle, pull, damage, or modify the power cord, and do not apply heat or place heavy objects on it.
- This may cause fire or electric shock.

Do not turn the breaker OFF/ON or disconnect/connect the power plug during operation.
- This may create sparks, which can cause fire.
- After the indoor unit is switched OFF with the remote controller, make sure to turn the breaker OFF or disconnect the power plug.

Do not expose your body directly to cool air for a prolonged length of time.
- This could be detrimental to your health.

The unit should not be installed, relocated, disassembled, altered, or repaired by the user.
- An improperly handled air conditioner may cause fire, electric shock, injury, or water leakage, etc. Consult your dealer.
- If the power supply cord is damaged, it must be replaced by the manufacturer or its service agent in order to avoid a hazard.

Meanings of symbols used in this manual

- ✗ : Be sure not to do.
- ☑ : Be sure to follow the instruction.
- ✈ : Never insert your finger or stick, etc.
- ✈ : Never step on the indoor/outdoor unit and do not put anything on them.
- 🚨 : Danger of electric shock. Be careful.
- ✄ : Be sure to disconnect the power supply plug from the power outlet.
- 🚫 : Be sure to shut off the power.
- ⚠ : Risk of fire.

When installing, relocating, or servicing the unit, make sure that no substance other than the specified refrigerant (R32/R410A) enters the refrigerant circuit.
- Any presence of foreign substance such as air can cause abnormal pressure rise and may result in explosion or injury.
- The use of any refrigerant other than that specified for the system will cause mechanical failure, system malfunction, or unit breakdown. In the worst case, this could lead to a serious impediment to securing product safety.

This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety.

Children should be supervised to ensure that they do not play with the appliance.

When installing or servicing the unit, the air conditioner must not be operated in an abnormal condition (such as burning smell), stop the air conditioner and disconnect the power plug or turn the breaker OFF.
- A continued operation in the abnormal state may cause a malfunction, fire, or electric shock. In this case, consult your dealer.
## SAFETY PRECAUTIONS

### WARNING

When the air conditioner does not cool or heat, there is a possibility of refrigerant leakage. If any refrigerant leakage is found, stop operations and ventilate the room well and consult your dealer immediately. If a repair involves recharging the unit with refrigerant, ask the service technician for details.

- The refrigerant used in the air conditioner is not harmful. Normally, it does not leak. However, if refrigerant leaks and comes in contact with fire or heating part of such a fan heater, kerosene heater, or cooking stove, it will create harmful gas and there is risk of fire.

The user should never attempt to wash the inside of the indoor unit. Should the inside of the unit require cleaning, contact your dealer.

- Unsuitable detergent may cause damage to plastic material inside the unit, which may result in water leakage. Should detergent come in contact with electrical parts or the motor, it will result in a malfunction, smoke, or fire.
- The appliance shall be stored in a room without continuously operating ignition sources (for example: open flames, an operating gas appliance or an operating electric heater).
- Be aware that refrigerants may not contain an odor.
- Do not use means to accelerate the defrosting process or to clean the appliance, other than those recommended by the manufacturer.
- Do not pierce or burn.

This unit should be installed in rooms which exceed the floor space specified in outdoor unit installation manual.
- Refer to outdoor unit installation manual.

This appliance is intended to be used by expert or trained users in shops, in light industry and on farms, or for commercial use by lay persons.

### CAUTION

- Do not touch the air inlet or the aluminum fins of the indoor/outdoor unit.
  - This may cause injury.
- Do not use insecticides or flammable sprays on the unit.
  - This may cause a fire or deformation of the unit.
- Do not expose pets or houseplants to direct airflow.
  - This may cause injury to the pets or plants.
- Do not place other electric appliances or furniture under the indoor/outdoor unit.
  - Water may drip down from the unit, which may cause damage or malfunction.
- Do not leave the unit on a damaged installation stand.
  - The unit may fall and cause injury.
- Do not step on an unstable bench to operate or clean the unit.
  - This may cause injury if you fall down.
- Do not pull the power cord.
  - This may cause a portion of the core wire to break, which may cause overheating or fire.
- Do not charge or disassemble the batteries, and do not throw them into a fire.
  - This may cause the batteries to leak, or cause a fire or explosion.
- Do not use the unit for special purposes, such as storing food, raising animals, growing plants, or preserving precision devices or art objects.
  - This may cause deterioration of quality, or harm to animals and plants.
- Do not expose combustion appliances to direct airflow.
  - This may cause incomplete combustion.
- Never put batteries in your mouth for any reason to avoid accidental ingestion.
  - Battery ingestion may cause choking and/or poisoning.

Before cleaning the unit, switch it OFF and disconnect the power plug or turn the breaker OFF.
- This may cause injury, since the fan inside rotates at high speeds during operation.

When the unit will be unused for a long time, disconnect the power plug or turn the breaker OFF.
- The unit may accumulate dirt, which may cause overheating or fire.
- Replace all batteries of the remote controller with new ones of the same type.
  - Using an old battery together with a new one may cause overheating, leakage, or explosion.

### IMPORTANT

Dirty filters cause condensation in the air conditioner which will contribute to the growth of fungi such as mold. It is therefore recommended to clean air filters every 2 weeks.

### For installation

#### WARNING

Consult your dealer for installing the air conditioner.
- It should not be installed by the user since installation requires specialized knowledge and skills. An improperly installed air conditioner may cause water leakage, fire, or electric shock.

Provide a dedicated power supply for the air conditioner.
- A non-dedicated power supply may cause overheating or fire.

Do not install the unit where flammable gas could leak.
- If gas leaks and accumulates around the outdoor unit, it may cause an explosion.

Earth the unit correctly.
- Do not connect the earth wire to a gas pipe, water pipe, lightning rod, or a telephone earth wire. Improper earthing may cause electric shock.

Earth the unit correctly.
- Do not connect the earth wire to a gas pipe, water pipe, lightning rod, or a telephone earth wire. Improper earthing may cause electric shock.

Ensure that the drain water is properly drained.
- If the drain passage is improper, water may drip down from the indoor/outdoor unit, wetting and damaging the furniture.

In case of an abnormal condition
- Immediately stop operating the air conditioner and consult your dealer.

If the battery fluid comes in contact with your skin or clothes, wash them thoroughly with clean water.
- If the battery fluid comes in contact with your eyes, wash them thoroughly with clean water and immediately seek medical attention.

Ensure that the area is well-ventilated when the unit is operated together with a combustion appliance.
- Inadequate ventilation may cause oxygen starvation.

Turn the breaker OFF when you hear thunder and there is a possibility of a lightning strike.
- The unit may be damaged if lightning strikes.

After the air conditioner is used for several seasons, perform inspection and maintenance in addition to normal cleaning.
- Dirt or dust in the unit may create an unpleasant odor, contribute to growth of fungi, such as mold, or clog the drain passage, and cause incomplete combustion.

Dirt or dust in the unit may create an unpleasant odor, contribute to growth of fungi, such as mold, or clog the drain passage, and cause deterioration of quality, or harm to animals and art objects.

Do not operate switches with wet hands.
- This may cause electric shock.

Do not clean the air conditioner with water or place an object that contains water, such as a flower vase, on it.
- This may cause fire or electric shock.

Do not step on or place any object on the outdoor unit.
- This may cause injury if you or the object falls down.

Dirty filters cause condensation in the air conditioner which will contribute to the growth of fungi such as mold. It is therefore recommended to clean air filters every 2 weeks.

#### CAUTION

- Do not store the appliance in a room without continuously operating ignition sources (for example: open flames, an operating gas appliance or an operating electric heater).
- Do not store the appliance in a room where it can be exposed to flammable or toxic gas.
- Do not store the appliance in a room where it can come in contact with electrical parts or the motor, which may cause overheating or fire.
- Do not store the appliance in a room where it can cause incomplete combustion.
- Do not store the appliance in a room where it can cause overheating or fire.
- Do not store the appliance in a room where it can cause electric shock.
- Do not store the appliance in a room where it can cause injury.
- Do not store the appliance in a room where it can cause damage.
- Do not store the appliance in a room where it can cause malfunction.
- Do not store the appliance in a room where it can cause injury.
- Do not store the appliance in a room where it can cause deformation.
- Do not store the appliance in a room where it can cause overheating or fire.
- Do not store the appliance in a room where it can cause electric shock.
- Do not store the appliance in a room where it can cause injury.
- Do not store the appliance in a room where it can cause deformation.
- Do not store the appliance in a room where it can cause overheating or fire.
- Do not store the appliance in a room where it can cause electric shock.
- Do not store the appliance in a room where it can cause injury.
OPERATING INSTRUCTIONS

PREPARATION BEFORE OPERATION

Before operation: Insert the power supply plug into the power outlet and/or turn the breaker on.

Installing the remote controller batteries

1. Remove the front lid.
2. Insert the negative pole of AAA alkaline batteries first.
3. Install the front lid.
4. Press RESET.

Note:
- Make sure the polarity of the batteries is correct.
- Do not use manganese batteries and leaking batteries. The remote controller could malfunction.
- Do not use rechargeable batteries.
- The battery replacement indicator lights up when the battery is running low. In about 7 days after the indicator starts lights up, the remote controller stops working.
- Replace all batteries with new ones of the same type.
- Batteries can be used for approximately 1 year. However, batteries with expired shelf lives last shorter.
- Press RESET gently using a thin instrument.

Setting current time

1. Press CLOCK.
2. Press either the TIME button or the TIMER buttons to set the time.
3. Press the DAY button to set the day.
4. Press CLOCK again.

Note:
- Press CLOCK gently using a thin instrument.
- Each press increases/decreases the time by 1 minute (10 minutes when pressed longer).
- Replace all batteries with new ones of the same type.
- Batteries can be used for approximately 1 year. However, batteries with expired shelf lives last shorter.
- Press RESET gently using a thin instrument.
- If the RESET button is not pressed, the remote controller may not operate correctly.
- Do not use rechargeable batteries.
- The battery replacement indicator lights up when the battery is running low. In about 7 days after the indicator starts lights up, the remote controller stops working.
- Replace all batteries with new ones of the same type.
- Batteries can be used for approximately 1 year. However, batteries with expired shelf lives last shorter.
- Press RESET gently using a thin instrument.
- If the RESET button is not pressed, the remote controller may not operate correctly.
NAME OF EACH PART

Indoor unit

Remote controller

Outdoor unit
SELECTING OPERATION MODES

AUTO mode (Auto changeover)
The unit selects the operation mode according to the difference between the
room temperature and the set temperature. During AUTO mode, the unit
changes mode (COOL→HEAT) when the room temperature is about 2°C
away from the set temperature for more than 15 minutes.

Note:
During multi system operation, the unit may not be able to switch opera-
tion mode between COOL and HEAT. In this case, the indoor unit be-
comes standby mode (Refer to table of Operation indicator lamp).

COOL mode
Enjoy cool air at your desired temperature.

Note:
Do not operate COOL mode at low outside temperature (less than -10°C).
Water condensed in the unit may drip and wet or damage furniture, etc.

DRY mode
Dehumidify your room. The room may be cooled slightly.
Temperature cannot be set during DRY mode.

HEAT mode
Enjoy warm air at your desired temperature.

FAN mode
Circulate the air in your room.
Temperature cannot be set during FAN mode.

Note:
After COOL/DRY mode operation, it is recommended to operate in the
FAN mode to dry inside the indoor unit.

Emergency operation
When the remote controller cannot be used...
Emergency operation can be activated by pressing the emergency operation
switch (E.O.SW) on the indoor unit.

Each time the E.O.SW is pressed, the operation changes in
the following order:

Emergency operation

| Operation indicator lamp | The first 30 minutes of operation is test run. Temperature control does not work, and fan speed is set to High. |

Multi system operation
Two or more indoor units can be operated by one outdoor unit. When several
indoor units are operated simultaneously, cooling and heating operations cannot
be done at the same time. When COOL is selected with one unit and HEAT with
another or vice versa, the unit operated later becomes standby mode.

Water may condense when HEAT is operated with other units within 3 hours
after COOL/DRY operation is stopped.
To prevent water condensation, perform HEAT with temperature set to 16°C
for about 30 minutes after COOL/DRY operation.

Auto restart function
If a power failure occurs or the main power is turned off during operation, “Auto
restart function” automatically starts operation in the same mode as the one set
with the remote controller just before the shutoff of the main power. When timer is
set, timer setting is cancelled and the unit starts operation when power is resumed.
If you do not want to use this function, please consult the service represen-
tative because the setting of the unit needs to be changed.
FAN SPEED AND AIRFLOW DIRECTION ADJUSTMENT

Press \( \text{FAN} \) to select fan speed. Each press changes fan speed in the following order:

\( \text{(AUTO)} \rightarrow \text{(Quiet)} \rightarrow \text{(Low)} \rightarrow \text{(Med.)} \rightarrow \text{(High)} \)

- Two short beeps are heard from the indoor unit when set to AUTO.

Press \( \text{VANE} \) to select air flow direction. Each press changes air flow direction in the following order:

\( \text{(AUTO)} \rightarrow (1) \rightarrow (2) \rightarrow (3) \rightarrow (4) \rightarrow (5) \rightarrow (\text{Swing}) \)

- Two short beeps are heard from the indoor unit when set to AUTO.

Airflow direction

- \( \text{(AUTO)} \) ....... The vane is set to the most efficient air flow direction. COOL/DRY: horizontal position. HEAT: downward position.
- \( \text{(Manual)} \) ....... For efficient air conditioning, select upper position for COOL/DRY, and lower position for HEAT.
- \( \text{(Swing)} \) ......... The vane moves up and down intermittently.

Press \( \text{VANE} \) to change horizontal airflow direction.

- The vertical vane moves for about 30 seconds.
- After 30 seconds, the vertical vane moves to its original position. In this case, press \( \text{VANE} \) again.

Press \( \text{VANE} \) again to set horizontal airflow direction.

- The vertical vane stops and the airflow direction is set.

1. Press \( \text{i-SAVE} \) during COOL, or HEAT mode to select i-save mode.

2. Set the temperature, fan speed and airflow direction.
   - The same setting is selected from the next time by simply pressing \( \text{i-SAVE} \).
   - Two settings can be saved. (One for COOL, one for HEAT)
   - Select the appropriate temperature, fan speed and airflow direction according to your room.

Press \( \text{i-SAVE} \) again to cancel i-save operation.

- i-save operation also is cancelled when the MODE button is pressed.

i-save operation

- A simplified set back function enables to recall the preferred (preset) setting with a single push of the \( \text{i-SAVE} \) button. Press the button again and you can go back to the previous setting in an instance.
- i-save operation cannot be set on the weekly timer.

Example of use:

1. Low energy mode
   Set the temperature 2°C to 3°C warmer in COOL and cooler in HEAT mode. This setting is suitable for unoccupied room, and while you are sleeping.

2. Saving frequently used settings
   Save your preferred setting for COOL and HEAT. This enables you to select your preferred setting with a single push of the button.
**Econo Cool Operation**

Press during COOL mode page 5 to start Econo Cool operation.

The unit performs swing operation vertically in various cycle according to the temperature of the unit. Set temperature is set 2°C higher automatically.

Press again to cancel Econo Cool operation.

- Pressing also cancels Econo Cool operation.

**What is “Econo Cool”?**

Swing airflow (change of air flow) makes you feel cooler than stationary airflow. The set temperature and the airflow direction are automatically changed by the microprocessor. It is possible to perform cooling operation with keeping comfort. As a result energy can be saved.

**Timer Operation (On/Off Timer)**

1. Press [ON] or [OFF] during operation to set the timer.
   - **ON** (ON timer): The unit turns ON at the set time.
   - **OFF** (OFF timer): The unit turns OFF at the set time.

   * [ON] or [OFF] blinks.
   * Make sure that the current time and day are set correctly.

2. Press [ ] (Increase) and [ ] (Decrease) to set the time of timer.
   Each press increases or decreases the set time by 10 minutes.

   - Set the timer while [ON] or [OFF] is blinking.

3. Press [ON] or [OFF] again to cancel timer.

**Note:**

- ON and OFF timers can be set together. mark indicates the order of timer operations.
- If power failure occurs while ON/OFF timer is set, see page 5 “Auto restart function”.

EN-7
• A maximum of 4 ON or OFF timers can be set for individual days of the week.
• A maximum of 28 ON or OFF timers can be set for a week.

E.g.: Runs at 24°C from waking up to leaving home, and runs at 27°C from getting home to going to bed on weekdays.
Runs at 27°C from waking up late to going bed early on weekends.

</table>

Note:
The simple ON/OFF timer setting is available while the weekly timer is on. In this case, the ON/OFF timer has priority over the weekly timer; the weekly timer operation will start again after the simple ON/OFF timer is complete.

Setting the weekly timer

* Make sure that the current time and day are set correctly.

1. Press and hold to enter the weekly timer setting mode.
   * blinks.

2. Press and to select setting day and number.
   * Pressing selects the day of the week to be set.
   * Pressing selects the setting number.
   * All days can be selected.

3. Press , and to set ON/OFF, time, and temperature.
   * Hold down the button to change the time quickly.
   * The temperature can be set between 16°C and 31°C at weekly timer.

4. Press and to continue setting the timer for other days and/or numbers.
   *  which was blinking goes out, and the current time will be displayed.

5. Press to complete and transmit the weekly timer setting.
   * When the weekly timer is ON, the day of the week whose timer setting is complete, will light.
   * Pressing sets the timer to OFF.

Checking weekly timer setting

1. Press and hold to enter the weekly timer setting mode.
   * blinks.

2. Press or to view the setting of the particular day or number.
   * Pressing cancels the setting.

Note:
The saved settings will not be cleared when the weekly timer is turned OFF.

E.g.: Runs at 24°C from waking up to leaving home, and runs at 27°C from getting home to going to bed on weekdays.
Runs at 27°C from waking up late to going bed early on weekends.

</table>

Pressing selects the day of the week to be set.
Pressing selects the setting number.
* All days can be selected.
Cleaning

Instructions:
- Switch off the power supply or turn off the breaker before cleaning.
- Be careful not to touch the metal parts with your hands.
- Do not use benzine, thinner, polishing powder, or insecticide.
- Use only diluted mild detergents.
- Do not expose parts to direct sunlight, heat, or flames to dry.
- Do not use water hotter than 50°C.
- Do not use a scrubbing brush, a hard sponge, or the like.
- Do not soak or rinse the horizontal vane.

Open
1. Press the tabs on the intake grille.
2. Open the intake grille while holding it.

Close
1. Close the intake grille.
2. Press around the each tab of the intake grille until a “click” is heard and press the center.
CLEANING

Intake grille

1. Slide the shafts and unhook the safety strings to remove.
   • Wipe with a soft dry cloth, or wash it with water using soft cloth, sponge, etc.
   • Do not soak it in water for more than two hours.
   • Dry it well in shade before installing it.

Air cleaning filter (Anti-Allergy Enzyme filter, option)

Back side of air filter

Clean every 3 months:
• Remove dirt by a vacuum cleaner.
When dirt cannot be removed by vacuum cleaning:
• Soak the filter and its frame in lukewarm water before rinsing it.
   (Diluted mild detergents can be used when dirt cannot be removed.)
• After washing, dry it well in shade.
Every year:
• Replace it with a new air cleaning filter for best performance.
   • Parts Number MAC-408FT-E

Air filter (Air purifying filter)

• Clean every 2 weeks
• Remove dirt by a vacuum cleaner, or rinse with water.
• Dry it well in shade before installing it.

2. Install the intake grille by following the removal procedure in reverse.

WARNING

Make sure to hook the safety string of the intake grille.
Not doing so may cause injury due to the intake grille falling.

Important

• Clean the filters regularly for best performance and to reduce power consumption.
• Dirty filters cause condensation in the air conditioner which will contribute to the growth of fungi such as mold. It is therefore recommended to clean air filters every 2 weeks.
WHEN YOU THINK THAT TROUBLE HAS OCCURRED

Even if these items are checked, when the unit does not recover from the trouble, stop using the air conditioner and consult your dealer.

<th>Explanation &amp; Check points</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Indoor Unit</strong></td>
<td></td>
</tr>
<tr>
<td>The unit cannot be operated.</td>
<td>- Is the breaker turned on?</td>
</tr>
<tr>
<td></td>
<td>- Is the ON timer set?</td>
</tr>
<tr>
<td>The unit cannot be operated for about 3 minutes when restarted.</td>
<td>- This protects the unit according to instructions from the microprocessor. Please wait.</td>
</tr>
<tr>
<td>Mist is discharged from the air outlet of the indoor unit.</td>
<td>- The cool air from the unit rapidly cools moisture in the air inside the room, and it turns into mist.</td>
</tr>
<tr>
<td>The swing operation of the HORIZONTAL VANE is suspended for a while, then restarted.</td>
<td>- This is for the swing operation of the HORIZONTAL VANE to be performed normally.</td>
</tr>
<tr>
<td>The air flow direction changes during operation.</td>
<td>- In the heating operation, if the air flow temperature is too low or when defrosting is being done, the horizontal vane is automatically set to horizontal position.</td>
</tr>
<tr>
<td>The operation is stopped for about 10 minutes in the heating operation.</td>
<td>- Defrosting of the outdoor unit is being done. Since this is completed in max.10 minutes, please wait. (When the outside temperature is too low and humidity is too high, frost is formed.)</td>
</tr>
<tr>
<td>The unit starts operation by itself when the main power is turned on, though it isn’t operated with the remote controller.</td>
<td>- These models are equipped with an auto re-start function. When the main power is turned off without stopping the unit with the remote controller and is turned on again, the unit starts operation automatically in the same mode as the one set with the remote controller just before the shutoff of the main power. Refer to “Auto restart function.” ![Page 2]</td>
</tr>
<tr>
<td>The indoor unit which is not operating becomes warm and a sound, similar to water flowing, is heard from the unit.</td>
<td>- A small amount of refrigerant continues to flow into the indoor unit even though it is not operating.</td>
</tr>
<tr>
<td>The indoor unit discolors over time.</td>
<td>- Although plastic turns yellow due to the influence of some factors such as ultraviolet light and temperature, this has no effect on the product functions.</td>
</tr>
<tr>
<td><strong>Outdoor Unit (Multi system)</strong></td>
<td></td>
</tr>
<tr>
<td>When heating operation is selected, operation does not start right away.</td>
<td>- When operation is started during defrosting of outdoor unit is done, it takes a few minutes (max. 10 minutes) to blow out warm air.</td>
</tr>
<tr>
<td>The fan of the outdoor unit does not rotate even though the compressor is running. Even if the fan starts to rotate, it stops soon.</td>
<td>- When the outside temperature is low during cooling operation, the fan operates intermittently to maintain sufficient cooling capacity.</td>
</tr>
<tr>
<td>Water leaks from the outdoor unit.</td>
<td>- During COOL and DRY operations, pipe or pipe connecting sections are cooled and this causes water to condense.</td>
</tr>
<tr>
<td></td>
<td>- In the heating operation, water condensed on the heat exchanger drips down.</td>
</tr>
<tr>
<td></td>
<td>- In the heating operation, the defrosting operation makes water frozen on the outdoor unit melt and drip down.</td>
</tr>
<tr>
<td>White smoke is discharged from the outdoor unit.</td>
<td>- In the heating operation, vapor generated by the defrosting operation looks like white smoke.</td>
</tr>
<tr>
<td><strong>Remote controller</strong></td>
<td></td>
</tr>
<tr>
<td>The display on the remote controller does not appear or it is dim. The indoor unit does not respond to the remote control signal.</td>
<td>- Are the batteries exhausted? ![Page 3]</td>
</tr>
<tr>
<td></td>
<td>- Is the polarity (+, -) of the batteries correct? ![Page 3]</td>
</tr>
<tr>
<td></td>
<td>- Are any buttons on the remote controller of other electric appliances being pressed?</td>
</tr>
<tr>
<td><strong>Does not cool or heat</strong></td>
<td></td>
</tr>
<tr>
<td>The room cannot be cooled or heated sufficiently.</td>
<td>- Is the temperature setting appropriate? ![Page 4]</td>
</tr>
<tr>
<td></td>
<td>- Is the fan setting appropriate? Please change fan speed to Med. or High.</td>
</tr>
<tr>
<td></td>
<td>- Is the filter clean? ![Page 5]</td>
</tr>
<tr>
<td></td>
<td>- Is the fan or heat exchanger of the indoor unit clean? ![Page 5]</td>
</tr>
<tr>
<td></td>
<td>- Are there any obstructions blocking the air inlet or outlet of the indoor or outdoor unit?</td>
</tr>
<tr>
<td></td>
<td>- Is a window or door open?</td>
</tr>
<tr>
<td></td>
<td>- It may take a certain time to reach the setting temperature or may not reach that depending on the size of the room, the ambient temperature, and the like.</td>
</tr>
</tbody>
</table>

Symptom Explanation & Check points

- **The room cannot be cooled sufficiently.**
  - When a ventilation fan or a gas cooker is used in a room, the cooling load increases, resulting in an insufficient cooling effect.
  - When the outside temperature is high, the cooling effect may not be sufficient.

- **The room cannot be heated sufficiently.**
  - When the outside temperature is low, the heating effect may not be sufficient.

- **Air does not blow out soon in the heating operation.**
  - Please wait as the unit is preparing to blow out warm air.

- **The air from the indoor unit smells strange.**
  - Is the filter clean? ![Page 6] |
  - Is the fan or heat exchanger of the indoor unit clean? ![Page 6] |
  - The unit may emit an odor adhering to the wall, carpet, furniture, cloth, etc. and blow it out with the air.

- **Sound**
  - **Cracking sound is heard.**
    - This sound is generated by the expansion/contraction of the intake grille, etc. due to change in temperature.

- **The sound as bubbling is heard.**
  - This is the sound heard when the outside air is absorbed from the drain hose by turning on the range hood or the ventilation fan, making water flowing in the drain hose to spout out. This sound is also heard when the outside air blows into the drain hose in case the outside wind is strong.

- **Burbling sound is heard from the indoor unit when DRY/COOL operation is stopped.**
  - This is the sound of drained water flowing backward in the drain piping in the ceiling.

- **Mechanical sound is heard.**
  - This is the switching sound in turning on/off the fan or the compressor.

- **The sound of water flowing is heard.**
  - This is the sound of refrigerant or condensed water flowing in the unit.

- **Hissing sound is sometimes heard.**
  - This is the sound when the flow of refrigerant inside the unit is switched.

- **The sound of motor and swirling sound is heard from the indoor unit.**
  - This is the sound of water condensed during COOL/DRY operation being drained from the indoor unit.
  - Sound of water draining may also be heard from indoor units which are not operating. (The stop will work automatically. Please wait.)

- **Timer**
  - **Weekly timer does not operate according to settings.**
    - Is the ON/OFF timer set? ![Page 7] |
    - Transmit the setting information of the weekly timer to the indoor unit again. When the information is successfully received, a long beep will sound from the indoor unit. If information fails to be received, 3 short beeps will be heard. Ensure information is successfully received. ![Page 7] |
    - When a power failure occurs and the main power turns off, the indoor unit built-in clock will be incorrect. As a result, the weekly timer may not work normally. Be sure to place the remote controller where the signal can be received by the indoor unit.

- **The unit starts/stops the operation by itself.**
  - Is the weekly timer set? ![Page 8] |

- **Dirt**
  - **The ceiling and wall around the indoor unit get dirty.**
    - Please clean the periphery of the air conditioner frequently.
    - It may prevent the dirt to lower the wind blowing into the ceiling by adjusting the vertical wind direction.

In the following cases, stop using the air conditioner and consult your dealer.

- When water leaks or drips from the indoor unit.
- When the upper operation indicator lamp blinks.
- When the breaker trips frequently.
- When the remote control signal is not received in a room where an electronic ON/OFF type fluorescent lamp (inverter-type fluorescent lamp, etc.) is used.
- Operation of the air conditioner interferes with radio or TV reception. An amplifier may be required for the affected device.
- When an abnormal sound is heard.
- When any refrigerant leakage is found.
When the Air Conditioner is Not Going to Be Used for a Long Time

1. Operate by COOL mode with the highest temperature set or FAN mode for 3 to 4 hours. This dries the inside of the unit. [Page 5]

2. Press \( \text{OFF} \) to stop the operation.

3. Turn off the breaker and/or disconnect the power supply plug.

4. Remove all batteries from the remote controller.

When using the air conditioner again:

1. Clean the air filter. [Page 9, 10]

2. Check that the air inlet and outlet of the indoor and outdoor units are not blocked.

3. Check that the earth is connected correctly.

4. Refer to the “PREPARATION BEFORE OPERATION”, and follow the instructions. [Page 3]

Installation Place and Electrical Work

Installation place
Avoid installing the air conditioner in the following places.
- Where there is much machine oil.
- Savvy places such as the seaside.
- Where sulfide gas is generated such as the hot spring, sewage, waste water.
- Where oil is splashed or where the area is filled with oily smoke (such as cooking areas and factories, in which the properties of plastic could be changed and damaged).
- Where there is high-frequency or wireless equipment.
- Where the air from the outdoor unit air outlet is blocked.
- Where the operation sound or air from the outdoor unit bothers the house next door.
- The mounting height of indoor unit 2.2 m is recommended. If it is impossible, please consult your dealer.

- Do not operate the air conditioner during interior construction and finishing work, or while waxing the floor. Before operating the air conditioner, ventilate the room well after such work is performed. Otherwise, it may cause volatile elements to adhere inside the air conditioner, resulting in water leakage or scattering of dew.

Electrical work
- Provide an exclusive circuit for the power supply of the air conditioner.
- Be sure to observe the breaker capacity.

If you have any questions, consult your dealer.

*Note 1.

DB: Dry Bulb
WB: Wet Bulb

Note:
1. MLZ-KP has no specifications for single combination. This indoor model is only for multi system air conditioner.

As for the specifications of multi system, please confirm your dealer and/or refer to the catalogue.
