Thank you very much for purchasing this Mitsubishi room air conditioner.

- To use this unit correctly and safely, be sure to read this operating instructions before use. Keep this manual carefully for later reference.
- Be sure to receive a guarantee card from your dealer and check that the purchased data and shop name, etc. are entered correctly.
- This air conditioner should not be installed by the customer. (Safety and performance functions cannot be assured.)
SAFETY PRECAUTIONS

- Since rotating parts and parts which could cause an electric shock are used in this product, be sure to read these “Safety Precautions” before use.
- Since the cautionary items shown here are important for safety, be sure to observe them.

Marks and their meanings

⚠️ WARNING: Incorrect handling could cause a serious hazard, such as death, serious injury, etc. with a high probability.
⚠️ CAUTION: Incorrect handling could cause a serious hazard depending on the conditions.

Meanings of symbols used in this manual

- The colour of the sticker affixed to the unit is written in the parentheses.
  - : Be sure not to do.
  - Be sure to follow the instruction.
  - : Be sure to disconnect the power supply plug from the power outlet.
  - : Be sure to shut off the power.
  - : After reading this manual, keep it together with the installation manual in a handy place for easy reference.

⚠️ WARNING
- Do not use intermediate connection of the power supply cord or the extension cord and do not connect many devices to one AC outlet.
  - A fire or an electric shock may result from poor contact, poor insulation, exceeding the permissible current, etc.
- Do not scratch or process the power supply cord, etc.
  - Do not put heavy object on the power supply cord and do not scratch or process the cord. The cord may be damaged and this may cause a fire or an electric shock.
- Do not turn the breaker off/on or disconnect/connect the power supply plug during operation.
  - This may cause a fire due to spark, etc.
  - Be sure to turn off the breaker or disconnect the power supply plug absolutely after switching the indoor unit off with the remote controller.
- Do not expose your skin directly to cool air for a long time.
  - This could damage your health.
- The customer should not install this unit.
  - If this is done incorrectly, it may cause a fire, an electric shock, or injury from the unit falling, water leaking, etc. Consult your dealer.
- Do not insert your finger or a stick, etc. into the air inlet/outlet.
  - Since the fan rotates at high speed, this may cause an injury.
  - Young children should be supervised to ensure that they do not play with the air conditioner.
- Do not pull the power supply cord.
  - This may result in leakage, fire or an explosion.
- Do not plug the unit for a long time in high humidity, e.g. leaving a door or window open.
  - In the cooling mode, if the unit is operated in a room with high humidity (80% RH or more) for a long time, water condensed in the air conditioner may drop and wet or damage furniture, etc.

⚠️ CAUTION
- When the air filter is to be removed, do not touch the metal parts of the indoor unit.
  - This may cause an injury.
- Do not use an insecticide or flammable spray.
  - This may cause a fire or deformation of the cabinet.
- Do not put a pet or houseplant where it will be exposed to direct airflow.
  - This may cause a fire, an electric shock, or injury from the unit falling, water leaking, etc.
- Do not leave the unit on an installation stand which is damaged.
  - The unit may fall and this may cause an injury.
- Do not operate the power supply cord may be disconnected and this may cause a fire.
- Do not charge or disassemble the batteries and do not throw them into a fire.
  - This may result in leakage, fire or an explosion.
- Do not operate the unit at low outside temperature (less than -10°C) in the cooling mode.
  - The core wire of the power supply cord may be disconnected and this may cause a fire.

- This air conditioner is NOT intended for use by children or infirm persons without supervisions.

![Warning Mark Positions](image)
SAFETY PRECAUTIONS

CAUTION
Do not use the unit for special purposes.
• Do not use this air conditioner to preserve precision devices, food, animals, plants and art objects. This may cause deterioration of quality, etc.

Do not put a stove, etc. where they are exposed to direct airflow.
• This may cause imperfect combustion.

When the unit is to be cleaned, switch it off and disconnect the power supply plug or turn off the breaker.
• Since the fan rotates at high speed during operation, this may cause an injury.

When the unit is not going to be used for a long time, disconnect the power supply plug or turn off the breaker.
• Otherwise, dirt may collect and this may cause a fire.

Replace the 2 batteries with new ones of same type.
• Using an old battery together with a new one may result in heat generation, leakage or an explosion.

If liquid from the batteries gets onto your skin or clothes, wash it well with clean water.
• If liquid from the batteries gets into your eyes, wash them well with clean water and consult a doctor at once.

Ventilate well in using the unit with a stove, etc.
• An oxygen shortage may occur.

Do not operate switches with wet hands.
• This may cause an electric shock.

Do not clean the air conditioner with water.
• Water may enter the unit and degrade the insulation. This may cause an electric shock.

Do not step or put anything on the indoor/outdoor unit.
• This may cause an injury, etc. if you or something falls down.

FOR INSTALLATION

WARNING
• Consult your dealer for installation of the air conditioner.

CAUTION
Do not install the unit where flammable gas could leak.
• If gas leaks and contacts around the unit, it may cause an explosion.

Earth the unit.
• Do not connect the earth to a gas pipe, water pipe, lightning rod or the earth of a telephone. If the earthing is incorrect, it may cause an electric shock.

Install an earth leakage breaker depending on the place where the air conditioner is to be installed (humid places, etc.).
• If the earth leakage breaker is not installed, it may cause an electric shock.

Drain should be fully drained.
• If the drainage route is incomplete, water may drop from the unit. This may wet and damage the furniture.

NAME OF EACH PART

Indoor unit

Outdoor unit

MUZ-GA25/35VA

MUZ-GB50VA
NAME OF EACH PART

Remote controller

PREPARATION BEFORE OPERATION

Auto restart function

These models are equipped with an auto restart function. If you do not want to use this function, please consult the service representative because the setting of the unit needs to be changed.

Auto restart function is ...
When the indoor unit is controlled with the remote controller, the operation mode, the set temperature and the fan speed are stored in the memory. If a power failure occurs or the main power is turned off during operation, “Auto restart function” sets automatically to start operating in the same mode as the one set with the remote controller just before the shutoff of the main power. (Refer to page 6 for details.)

Outdoor unit

Insert the power supply plug into the power outlet and/or turn the breaker on.

WARNING:
Remove dirt from the power supply plug and insert the plug securely. If dirt adheres to the plug or insertion is incomplete, it may cause a fire or an electric shock.

Remote controller

Use the remote controller provided with the unit only. Do not use other remote controller.
PREPARATION BEFORE OPERATION

Remote controller

How to set the batteries and the current time

1. Remove the front lid and insert batteries. Then reattach the front lid.

Insert the minus pole of the batteries first. Check if the polarity of the batteries is correct.

2. Press the RESET button.

Press using a thin stick.

• If the RESET button is not pressed, the remote controller may not operate correctly.
• Be sure to press the RESET button not too strongly.

3. Press the CLOCK set button.

Press using a thin stick.

• Each time the button is pressed, the set time increases by 1 minute, and each time the button is pressed, the set time decreases by 1 minute.
• Pressing those buttons longer increases/decreases the set time by 10 minutes.

4. Press the (Forward) and (Backward) buttons (TIME SET buttons) to set the current time.

5. Press the CLOCK set button again and close the front lid.

Handling of the remote controller

• The range that the signal can reach is about 6 m when the remote controller is pointed at the front of the indoor unit.
• When a button is pressed, one or two beeps will be heard from the indoor unit. If no sound is heard, operate again.
• Use the remote controller carefully.
  If it is dropped, thrown or it gets wet, the remote controller may not operate.

When installing on a wall, etc.

• Install the remote controller holder in a position where the signal reception sound (beep) can be heard from the indoor unit when the button is pressed.

How to install/remove the remote controller

Installing: Insert the remote controller downward.
Removing: Pull it up.

Dry-cell batteries

■ Reference for replacing batteries
Replace the batteries with new AAA alkaline batteries in the following cases:
• When the indoor unit does not respond to the remote control signal.
• When the display on the remote controller becomes dim.
• When a button of the remote controller is pressed, all displays appear on the screen, and then disappear immediately.

Do not use manganese batteries. The remote controller could malfunction.
• The service life of an alkaline battery is about 1 year. However, a battery whose time limit is approaching may be exhausted soon. The recommended usable time limit is indicated (month/year) on the bottom of the battery.
• To prevent liquid leakage, take out all batteries when the remote controller is not going to be used for a long time.

CAUTION:
If liquid from the batteries gets onto your skin or clothes, wash it well with clean water. If liquid from the batteries gets into your eyes, wash them well with clean water and consult a doctor at once.
• Do not use rechargeable batteries.
• Replace the 2 batteries with new ones of the same type.
• Dispose of exhausted batteries in the correct manner.

When the remote controller cannot be used (emergency operation)

When the batteries of the remote controller run out or the remote controller malfunctions, the emergency operation can be done using the EMERGENCY OPERATION switch.

1. Press the EMERGENCY OPERATION switch.

To stop the emergency operation, press the EMERGENCY OPERATION switch once (in case of EMERGENCY HEAT MODE) or twice (in case of EMERGENCY COOL MODE).

• Each time the EMERGENCY OPERATION switch is pressed, the unit will operate in order of EMERGENCY COOL MODE, EMERGENCY HEAT MODE and STOP MODE.
However, when the EMERGENCY OPERATION switch is once pressed, the unit will operate in test run for 30 minutes and then the operation mode shifts to EMERGENCY MODE.

Operation mode COOL HEAT
Set temperature 24°C 24°C
Fan speed Medium Medium
Horizontal vane Auto Auto

• The operation mode is indicated by the Operation Indicator lamp on the indoor unit as following figure.

Operation Indicator lamp

EMERGENCY COOL
EMERGENCY HEAT
STOP
AUTO CHANGEOVER... AUTO MODE OPERATION

An automatic cooling and heating changeover operation system ensures easy control and year-round air conditioning.

Once the desired temperature is set, unit operation is switched automatically between cooling and heating according to the room temperature. In addition, fan control of the outdoor unit enables cooling operation at outside temperature as low as -10°C.

To select the AUTO mode:

1. Press the ON/OFF button.
2. Select the AUTO (AUTO) mode by pressing the MODE button.
   - Each time this button is pressed, the operation mode is changed in sequence: AUTO → COOL → DRY → HEAT.
   - The set temperature is also displayed on the remote controller.

To stop operation:

1. Press the ON/OFF button.
2. After the operation mode is set once, the operation starts in the same mode as the one set previously from the next time by simply pressing the ON/OFF button.

When the set temperature is to be changed:

- Press the TOO WARM button to lower the temperature. One press lowers the temperature by about 1°C.
- Press the TOO COOL button to raise the temperature. One press raises the temperature by about 1°C.

Description of "AUTO CHANGEOVER"

(1) Initial mode
   - When unit starts the operation with AUTO operation from off;
     • If the room temperature is higher than the set temperature, operation starts in COOL mode.
     • If the room temperature is equal to or lower than the set temperature, operation starts in HEAT mode.

(2) Mode change
   - COOL mode changes to HEAT mode when about 15 minutes have passed with the room temperature 2 degrees below the set temperature.
   - HEAT mode changes to COOL mode when about 15 minutes have passed with the room temperature 2 degrees above the set temperature.

NOTE:
   - If two or more indoor units are operating in multi system, there might be a case that the indoor unit, which is operating in AUTO, cannot change over to the other operating mode (COOL, DRY, HEAT) and becomes a state of standby. Refer to the detailed information for multi system air conditioner explained on the right.

Description of "AUTO RESTART FUNCTION"

- These units are equipped with an auto restart function. When the main power is turned on, the air conditioner will start operation automatically in the same mode as the one set with the remote controller before the shutoff of the main power.
- If the unit was set to off with the remote controller before the shutoff of the main power, it will remain stopped even after the main power is turned on.
- If the unit is operated in AUTO mode before power failure, the operation mode (COOL, DRY or HEAT) is not stored in the memory. When the main power is turned on, the unit decides the operation mode by the initial room temperature at restart and starts operation again.

Information for multi system air conditioner

Multi system air conditioner can connect two or more indoor units with one outdoor unit. According to the capacity, two or more units can operate simultaneously.

- When you try to operate two or more indoor units with one outdoor unit simultaneously, one for the cooling and the other for heating, the operation mode of the indoor unit that operates earlier is selected. The other indoor units that will start the operation later cannot operate, indicating an operation state. (Refer to the table of Operation Indicator lamp below.)
- In this case, please set all the indoor units to the same operation mode.
- When indoor unit starts the operation while the defrosting of outdoor unit is being done, it takes a few minutes (max. 10 minutes) to blow out the warm air.
- In the heating operation, the indoor unit that does not operate may get warm or the sound of refrigerant flowing may be heard. This is not a malfunction since the refrigerant continuously flows into the indoor unit that does not operate.

Details of display on the indoor unit

The operation indicator at the right side of the indoor unit indicates the operation state.

Operation Indicator

Lighted
- This shows that the air conditioner is operating to reach the target temperature. Please wait until the target temperature is obtained.
- This shows that the room temperature is approaching the target temperature. About 2°C or less

Blinking
- This shows a state of standby for operation. Please refer to Information for multi system air conditioner above.

Not lighted

MANUAL OPERATION (COOL, DRY, HEAT)

To select the COOL, DRY or HEAT mode:

1. Press the COOL button.
2. Select the operation mode by pressing the COOL button.

Each time this button is pressed, the operation mode is changed in sequence:

(AUTO) → (COOL) → (DRY) → (HEAT)

To stop operation:

Press the button.

After the operation mode is set once, the operation starts in the same mode as the one set previously by simply pressing the button.

When the set temperature is to be changed:

• Press the button to lower the temperature. One press lowers the temperature by about 1°C.
• Press the button to raise the temperature. One press raises the temperature by about 1°C.

In COOL operation

• When the outside temperature is low, the fan of the outdoor unit turns on and off frequently or decreases the rotation speed to maintain sufficient cooling capacity.

In DRY operation

• The temperature control (temperature setting) cannot be done.
• The room temperature is slightly lowered in this operation mode.

The details of the display on the indoor unit are explained on page 6.

If the air conditioner doesn’t cool or heat effectively...

If the fan speed is set to Low or AUTO, sometimes the air conditioner may not cool or heat the air effectively. In this case, change the fan speed to Med. or upper.

AIR FLOW VELOCITY AND DIRECTION ADJUSTMENT

To change the AIR FLOW velocity, press the button. Each time the button is pressed, the fan speed is changed in sequence:

(Low) → (Med.) → (High) → (Super High) → AUTO

• Use the (Super High) notch to cool/heat the room more efficiently.
• If the operating sound of the air conditioner disturbs your sleep, use the (Low) notch.

To change the AIR FLOW blowing direction vertically, press the button. Each time the button is pressed, the angle of the horizontal vane is changed in sequence:

(1) → (2) → (3) → (4) → SWING → AUTO

SWING OPERATION

Use the swing operation for the air flow to reach all corners of the room.

Recommended horizontal vane range for more efficient air-conditioning

Use the AUTO position usually.

Use position (1) in the COOL or DRY mode and use positions (2) to (4) in the HEAT mode when adjusting to your requirements.
AIR FLOW VELOCITY AND DIRECTION ADJUSTMENT

Movement of the horizontal vane

<table>
<thead>
<tr>
<th>COOL/DRY</th>
<th>HEAT</th>

</thead>
<tbody>
<tr>
<td><strong>AUTO</strong></td>
<td><img src="image1.png" alt="Diagram" /></td>
</tr>
<tr>
<td><strong>MANUAL</strong></td>
<td><img src="image2.png" alt="Diagram" /></td>
</tr>
</tbody>
</table>

**NOTE:**
- The vane automatically moves to horizontal position. It will not swing.
- To constantly change the air flow direction, select SWING with the VANE button.
- Immediately after the air conditioner starts operating, the vane stays at horizontal position. Once the air from the indoor unit becomes sufficiently warm, the vane moves to position (4).
- Once the air conditioner starts operating, the fan speed increases gradually as the air from the indoor unit gets warmer, and continues until the set speed is finally reached.

Adjust the vane before operation starts.
Since the horizontal vane moves automatically, your fingers may be caught.

To change the air flow direction not to blow directly onto your body.

**To change the air flow direction**

- Pressing and holding the VANE button for 2 seconds or more causes the horizontal vane to reverse and move to horizontal position.

**When to use this function?**

- The air conditioner starts the cooling or drying operation approx. 3 minutes after the vane has moved to the horizontal position.
- The air conditioner starts the heating operation approx. 3 minutes after the vane has moved to the horizontal position.

**NOTE:**
- If you make the air flow not to blow directly onto your body by pressing VANE button, the compressor stops for 3 minutes even during the operation of the air conditioner.
- The air conditioner operates with decreased air flow until the compressor turns on again.
ECONO COOL OPERATION

Use this operation when you want to be comfortable in COOL mode even with energy saved.

Perform the following operations while the unit is operating in the MANUAL COOL mode.

1. Press the button.
   When the (ECONO COOL) operation is selected in COOL mode, the air conditioner performs swing operation vertically in various cycle according to the temperature of air conditioner.
   Also SET TEMPERATURE is automatically set 2°C higher in COOL mode.

To release the ECONO COOL operation:

Press the button again.

- When the button is pressed or the operation mode is changed during the ECONO COOL operation, ECONO COOL operation is released.
- The E, or button and ON/OFF timer (explained below) are available.

What is “ECONO COOL”?
Swing air flow (change of air flow) makes you feel cooler than constant air flow. So, even though the set temperature is automatically set 2°C higher, it is possible to perform cooling operation with keeping comfort. As a result, energy can be saved.

TIMER OPERATION (ON/OFF TIMER)

It is convenient to set the timer when you go to bed, when you get home, when you get up, etc.

How to set the ON timer

1. Press the button during operation.
   Each time the button is pressed, the ON timer mode alternates between ON and OFF.
2. Set the time of the timer using the TIME buttons (Forward) and (Backward).
   Each time the button is pressed, the set time increases by 10 minutes; each time the button is pressed, the set time decreases by 10 minutes.

To release the ON timer:

Press the button.

Programming timer operation

The ON timer and the OFF timer can be used in combination. The timer of the set time that is reached first will operate first.

1. Press the button.
   When the button is pressed, the operation mode is changed during the ECONO COOL operation.
2. Press the button during operation.

To release the OFF timer:

Press the button.

ECONO COOL

Use this operation when you want to be comfortable in COOL mode even with energy saved.

1. Press the button.
   When the ECONO COOL operation is selected in COOL mode, the air conditioner performs swing operation vertically in various cycle according to the temperature of air conditioner.
   Also SET TEMPERATURE is automatically set 2°C higher in COOL mode.

To release the ECONO COOL operation:

Press the button again.

- When the button is pressed or the operation mode is changed during the ECONO COOL operation, ECONO COOL operation is released.
- The E, or button and ON/OFF timer (explained below) are available.

What is “ECONO COOL”?
Swing air flow (change of air flow) makes you feel cooler than constant air flow. So, even though the set temperature is automatically set 2°C higher, it is possible to perform cooling operation with keeping comfort. As a result, energy can be saved.

WHEN THE AIR CONDITIONER IS NOT GOING TO BE USED FOR A LONG TIME

When it is not going to be used for a long time:

1. Perform the FAN operation for 3 or 4 hours to dry the inside of the air conditioner.
   - To perform FAN operation, set the remote controller to the highest temperature in the MANUAL COOL mode. (Refer to page 7.)
2. Turn off the breaker and/or disconnect the power supply plug.
   CAUTION: Turn off the breaker or disconnect the power supply plug when the air conditioner is not going to be used for a long time.
   Dirt may collect and this may cause a fire.
3. Remove the batteries from the remote controller.
   CAUTION: To prevent liquid leakage, take out all batteries when the remote controller is not going to be used for a long time.

MAINTENANCE

Before starting maintenance

1. Turn off the breaker and/or disconnect the power supply plug.
   CAUTION: When the unit is to be cleaned, switch it off and disconnect the power supply plug or turn off the breaker.
   Since the fan rotates at high speed during operation, it may cause an injury.

Cleaning the indoor unit

1. Clean the unit using a soft dry cloth.
   - If the dirt is noticeable, wipe the unit with a cloth soaked in a solution of mild detergent diluted in lukewarm water.
   - Do not use gasoline, thinner, benzine, polishing powder, or insecticide. The unit may be damaged.
   - The front panel may come off if it is lifted up past its level position. If the front panel comes off, refer to step in CLEANING THE FRONT PANEL.

Cleaning the outdoor unit

1. Clean the unit using a soft dry cloth.
   - If the dirt is noticeable, wipe the unit with a cloth soaked in a solution of mild detergent diluted in lukewarm water.
   - Do not use gasoline, thinner, benzine, polishing powder, or insecticide. The unit may be damaged.
   - The front panel may come off if it is lifted up past its level position. If the front panel comes off, refer to step in CLEANING THE FRONT PANEL.
CLEANING THE FRONT PANEL, HEAT EXCHANGER AND FAN

Front panel

1 Hold both ends of the front panel and lift the panel up until a “click” is heard. (1) Holding the hinges, lift the panel up until it is level, and pull the hinges forward to remove the front panel. (2)

CAUTION:
• Do not drop the front panel or pull it out forcibly. The panel may be damaged.
• Do not step onto an unstable bench when removing or installing the front panel. This may cause an injury, etc., if you fall down.

2 Wipe the front panel with a soft dry cloth or wash it with water. After washing the panel, wipe up the remaining water with a soft dry cloth and let it dry out of direct sunlight.
• If the dirt is noticeable, wipe the front panel with a cloth soaked in a solution of mild detergent diluted in lukewarm water.
• Do not use gasoline, benzine, thinner, polishing powder, or insecticide and do not wash the front panel with a scrubbing brush or the hard surface of a sponge.
• Do not soak the front panel in water/lukewarm water longer than two hours and do not expose the panel to direct sunlight, heat, or flames when drying it. The panel may be deformed or discolored.

3 Hold both ends of the front panel, keep the panel level, and insert the hinges into the holes on the upper part of the indoor unit until they click into place. Then, close the front panel securely and press the three positions on the front panel as indicated by the arrows.

Heat exchanger

You can sweep the surface of heat exchanger if you install the brush of QUICK CLEAN KIT to your vacuum cleaner. Please refer to the instructions described in QUICK CLEAN KIT for details.

WARNING:
• Do not touch the heat exchanger directly with your hands. Otherwise you may get injured. (It is recommended to protect your hands with a pair of gloves.)

CAUTION:
• Do not step onto an unstable bench when cleaning. Otherwise you may fall down and get injured.
• Use only the brush of QUICK CLEAN KIT. Do not use other stuffs. Otherwise the heat exchanger of the indoor unit may get damaged.

Optional product

<table>
<thead>
<tr>
<th>Name of parts</th>
<th>Quick Clean Kit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Part number</td>
<td>MAC-093SS-E</td>
</tr>
</tbody>
</table>

Optional product is available from your local dealer.

NOTE: The QUICK CLEAN KIT can only be fitted to a vacuum cleaner with a hose/tube diameter (inside diameter) of 32 to 39 mm. Refer to the instructions of the QUICK CLEAN KIT.

Fan

Refer to page 12 for cleaning the fan.

CLEANING THE CATECHIN AIR FILTER

Cleaning the catechin air filter (about once every 2 weeks)

1 Remove the catechin air filter.
2 Remove dirt from the catechin air filter using a vacuum cleaner or by washing the filter with water.
• Do not wash with scrubbing brush or hard surface of sponge. Otherwise, the filter may deform.
• If the dirt is noticeable, wash the filter with a solution of mild detergent diluted in lukewarm water.
• If hot water (50°C or more) is used, the filter may be deformed.

3 After washing with water/lukewarm water, dry the catechin air filter well in the shade.
• Do not expose the catechin air filter to direct sunlight or heat from a fire when drying it.

4 Install the catechin air filter.

(SECURELY INSTALL ITS TABS.)

CAUTION: When the catechin air filter is to be removed, do not touch the metal parts of the indoor unit. This may cause an injury.

What is “Catechin air filter”? The air filter is dyed with a natural material, catechin, that is contained in tea. The catechin air filter deodorizes odor and noxious gases such as formaldehyde, ammonia, and acetaldehyde. Moreover, it restrains the activity of the viruses adhering to the filter.
CLEANING THE AIR CLEANING FILTER

Cleaning the air cleaning filter (about once every 3 months)

1. Remove the catechin air filter (left one). The air cleaning filter is not attached to the right side catechin air filter.

2. Pull up the tabs on both sides of the air cleaning filter with your finger and remove the air cleaning filter (blue bellows type) from the catechin air filter.

3. Soak the filter together with its frame in lukewarm water and wash it.
   - If the dirt is noticeable, use a solution of mild detergent diluted in lukewarm water.
   - If hot water (50°C or more) is used, the filter may be deformed.
   - Do not use a scrubbing brush or sponge. This may damage the surface of the filter.
   - Do not use a chlorine detergent.

4. After rinsing with water/lukewarm water, shake off the excess water and dry the filter well in the shade.
   - Do not expose the filter to direct sunlight or heat from a fire when drying it.

REPLACEMENT OF THE AIR CLEANING FILTER

When the capacity is lowered because of dirt, etc., it is necessary to replace the air cleaning filter.

Air cleaning filter replacement (about once every year)

1. Remove the catechin air filter (left one). The air cleaning filter is not attached to the right side catechin air filter.

2. Pull up the tabs on both sides of the air cleaning filter with your finger and remove the air cleaning filter (blue bellows type) from the catechin air filter.

3. Attach a new air cleaning filter to the catechin air filter so that all 8 tabs on the catechin air filter are securely installed.

4. Install the catechin air filter. (Securely install its tabs.)

5. Securely close the front panel.

Air cleaning filter:

- If the air cleaning filter is clogged, it may lower the unit’s capacity or cause condensation at the air outlet.
- The air cleaning filter is disposable. The standard usable term is about 1 year.

Optional parts    Optional parts are available from your local dealer.

<table>
<thead>
<tr>
<th>Name of parts</th>
<th>Parts number</th>

</thead>
<tbody>
<tr>
<td>AIR CLEANING FILTER (Anti-Allergy Enzyme Filter)</td>
<td>MAC-415FT-E</td>
</tr>
</tbody>
</table>

This optional part is for the replacement of the left side filter only. No optional part is available for the right side filter.
CLEANING THE AIR OUTLET AND FAN OF THE INDOOR UNIT

Before cleaning

Switch the indoor unit off with the remote controller and disconnect the power supply plug and/or turn off the breaker, otherwise you may get injured since the fan of the indoor unit rotates at high speed during operation.

Cleaning

1. Manually move the horizontal vane to the end towards you, and make sure the fan has stopped.

2. Remove the horizontal vane. Be sure to hold horizontal vane when unlocking the stoppers. Follow the procedure, 1 and 2, to remove the horizontal vane.

3. Swing the vertical vanes out one by one.
   1. Holding the unit lightly with one hand, grab the tab of each vertical vane with the other hand and pull it downward to swing out each vertical vane.
   2. Hold the tab of each vertical vane and move the vertical vanes in the directions of the arrows. The vanes cannot be removed.

4. Clean the air outlet and fan of the indoor unit. (Make sure the fan has stopped.)
   • Be careful not to injure your hands.
   • If the air outlet or fan is dirty, moldy, or dusty, clean with a wet or dry soft cloth or with the brush of QUICK CLEAN KIT which is installed to a vacuum cleaner. If the dirt is noticeable around the air outlet, clean with a cloth soaked in a solution of mild detergent diluted in lukewarm water.
   • Please refer to the instructions described in QUICK CLEAN KIT for the details of the way to clean with the brush of QUICK CLEAN KIT.
   • Do not use gasoline, benzine and polishing powder.
   • Do not use excessive force to the fan. Otherwise, it may be cracked.

5. Put the vertical vanes back to their original positions one by one.
   1. Hold the tab of each vertical vane and insert the vertical vanes into their respective grooves.
   2. Push each vertical vane until it clicks into place.

6. Install the horizontal vanes. (Reverse the removal procedures.)

   1. Insert the power supply plug into the power outlet and/or turn on the breaker.
   2. Check that all LED lamps are not blinking. If they are blinking, the horizontal vane is not installed correctly.

   In this case, disconnect the power supply plug and/or turn off the breaker, and then reinstall the horizontal vane by following the procedures in step 6.
   • If you operate the air conditioner after cleaning the air outlet and fan, do not get close to the air outlet as any remaining dirt may be discharged.

After Cleaning

Insert the power supply plug into the power outlet and/or turn on the breaker.
Check that all LED lamps are not blinking.
If they are blinking, the horizontal vane is not installed correctly.
In this case, disconnect the power supply plug and/or turn off the breaker, and then reinstall the horizontal vane by following the procedures in step 6.
• If you operate the air conditioner after cleaning the air outlet and fan, do not get close to the air outlet as any remaining dirt may be discharged.
BEFORE CONTACTING THE SERVICE REPRESENTATIVE, CHECK THE FOLLOWING AGAIN

<table>
<thead>
<tr>
<th>Question</th>
<th>Check points</th>
</tr>
</thead>
<tbody>
<tr>
<td>The air conditioner cannot be operated.</td>
<td>• Is the breaker turned on?</td>
</tr>
<tr>
<td>All LED lamps on the indoor unit are blinking.</td>
<td>• Is it the horizontal vane correctly attached to the indoor unit? (Page 12)</td>
</tr>
<tr>
<td>The horizontal vane does not move.</td>
<td>• Are the horizontal and vertical vanes correctly attached to the indoor unit? (Page 12)</td>
</tr>
<tr>
<td>The room cannot be cooled or heated sufficiently.</td>
<td>• Is the temperature setting correct? (Page 7)</td>
</tr>
<tr>
<td>The air from the indoor unit smells strange.</td>
<td>• Is the filter clean? (Page 10)</td>
</tr>
<tr>
<td>The display on the remote controller does not appear or it is dim. The indoor unit does not respond to the remote control signal.</td>
<td>• Are the batteries exhausted? (Page 5)</td>
</tr>
<tr>
<td>When a power failure occurs.</td>
<td>• Does the air conditioner start operating again?</td>
</tr>
</tbody>
</table>

Even if the above items are checked, when the air conditioner does not recover from the trouble, stop using the air conditioner and consult your dealer.

In the following cases, stop using the air conditioner and consult your dealer.

• When water leaks or drops from the indoor unit.
• When the left operation indicator lamp blinks.
• When the breaker trips frequently.
• The remote control signal may not be received in a room where an electronic electrical appliances are being pressed.
• When thunder is heard, stop operation and disconnect the power supply plug or turn off the breaker. Otherwise, the electrical parts may be damaged.

WHEN YOU THINK THAT TROUBLE HAS OCCURRED

<table>
<thead>
<tr>
<th>Question</th>
<th>Answer (not a malfunction)</th>
</tr>
</thead>
<tbody>
<tr>
<td>The air conditioner cannot be operated for about 3 minutes when restarted.</td>
<td>• This protects the air conditioner according to instructions from the microprocessor. Please wait.</td>
</tr>
<tr>
<td>Cracking sound is heard.</td>
<td>• This sound is generated by the expansion/contraction of the front panel, etc. due to change in temperature.</td>
</tr>
<tr>
<td>The air from the indoor unit smells strange.</td>
<td>• When the outside temperature is low, the fan may not operate to maintain sufficient cooling capacity.</td>
</tr>
<tr>
<td>The fan of the outdoor unit does not rotate even though the compressor is running. Even if the fan starts to rotate, it stops soon.</td>
<td>• When an electronic range hood or the ventilation fan and that makes water frozen on the outdoor unit melt and drip down.</td>
</tr>
<tr>
<td>The sound of water flowing is heard.</td>
<td>• This is the sound of refrigerant flowing inside the air conditioner.</td>
</tr>
</tbody>
</table>
| The room cannot be cooled sufficiently. | • When a ventilation fan or a gas cooker is used, the air flow cannot be controlled.
| Mist is discharged from the air outlet of the indoor unit. | • The cool air from the air conditioner rapidly cools and condenses inside the indoor room, and it turns into mist. |
| Mechanical sound is heard from the indoor unit. | • This is the switching sound in turning on/off the fan or the compressor. |
| The swing operation of the HORIZONTAL VANE is suspended for about 15 seconds, then restarted. | • This is for the swing operation of the HORIZONTAL VANE to be performed normally. |

<tr>
<th>Question</th>
<th>Answer (not a malfunction)</th>
</tr>
</thead>
<tbody>
<tr>
<td>The air conditioner is operated in COOL or DRY mode, if the operation continues with air blowing down for 1 hour, the direction of the air flow is automatically set to position (1) to prevent condensate water from dropping.</td>
<td></td>
</tr>
<tr>
<td>Water leaks from the outdoor unit.</td>
<td>• During COOL and DRY operations, pipe or pipe connecting sections are cooled and this causes water to condense.</td>
</tr>
<tr>
<td>Air does not blow out soon when the air conditioner is operated in COOL or DRY mode.</td>
<td>• In the heating operation, the defrosting operation makes water frozen on the outdoor unit melt and drip down.</td>
</tr>
<tr>
<td>The operation is stopped for about 10 minutes in the heating operation.</td>
<td>• The operation in the heating operation, vapor generated by the defrosting operation looks like white smoke.</td>
</tr>
<tr>
<td>Hissing sound is sometimes heard.</td>
<td>• This is the sound when the flow of refrigerant inside the air conditioner is switched.</td>
</tr>
<tr>
<td>The room cannot be heated sufficiently.</td>
<td>• When the outside air temperature is low, the heating effect may not be sufficient.</td>
</tr>
<tr>
<td>In a multi-unit system, the indoor unit which is not operating becomes warm and a sound, similar to water flowing, is heard from the unit.</td>
<td>• A small amount of refrigerant continues to flow into the indoor unit even though it is not operating.</td>
</tr>
<tr>
<td>The air conditioner starts the operation only with the main power turned on, though you do not operate the unit with the remote controller.</td>
<td>• These models are equipped with an auto restart function. When the main power is turned off without stopping the air conditioner with the remote controller and is turned on again, the air conditioner will start operation automatically in the same mode as the one set with the remote controller just before the shutoff of the main power.</td>
</tr>
</tbody>
</table>
**INSTALLATION, RELOCATION AND INSPECTION**

**Installation place**
Avoid installing the air conditioner in the following places.
- Where flammable gas could leak.

**CAUTION:**
Do not install the unit where flammable gas could leak. If gas leaks and collects around the unit, it may cause an explosion.
- Where there is much machine oil.
- Salty places such as the seaside.
- Where sulfide gas is generated such as a hot spring.
- Where oil is splashed or where the area is filled with oily smoke.
- Where there is high-frequency or wireless equipment.

**WARNING:**
If the air conditioner operates but does not cool or heat (depending on model) the room, consult your dealer since there may be a refrigerant leak. Be sure to ask the service representative whether there is refrigerant leakage or not when repairs are carried out.

The refrigerant charged in the air conditioner is safe. Refrigerant normally does not leak, however, if refrigerant gas leaks indoors, and comes into contact with the fire of a fan heater, space heater, stove, etc., harmful substances will be generated.

**Electrical work**
- Provide an exclusive circuit for the power supply of the air conditioner.
- Be sure to observe the breaker capacity.

**WARNING:**
- The customer should not install this unit.
- Do not use intermediate connection of the power supply cord or the extension cord and do not connect many devices to one AC outlet.

If installation is done incorrectly, it may cause a fire, an electric shock, or injury from the unit falling, water leaking, etc.

- Earth the unit.
- Do not connect the earth to a gas pipe, water pipe, lightning rod or the earth of a telephone. If the earthing is incorrect, it may cause an electric shock.
- Install an earth leakage breaker depending on the place where the air conditioner is to be installed (humid places, etc.).

The installation location of the outdoor unit should be at least 3 m away from the antennas for TV sets, radios, etc. In areas where the reception is weak, provide at least 1 m more space between the outdoor unit and the antenna of the affected device if operation of the air conditioner interferes with radio or TV reception.

**Guaranteed operating range**

**Operating sound considerations**
- Do not put an object around the air outlet of the outdoor unit. This may lower the capacity or increase the volume of the operating sound.
- If an abnormal sound is heard during operation, consult your dealer.

**Inspection and maintenance**
- When the air conditioner is used for several seasons, the capacity may be lowered due to dirt inside the unit.
- Depending on the condition, an odor may be generated or dehumidified water may not drain out smoothly due to dirt, dust, etc.
- It is recommended that the unit be inspected and maintained (charged) by specialist in addition to normal maintenance. Consult your dealer.

**Disposal**
To dispose of this product, consult your dealer.

If you have any questions, consult your dealer.
