MITSUBISHI ELECTRIC
Air-Conditioners

model
PEH-MYB

FOR USER

OPERATION MANUAL
For safe and correct use, please read this operation manual thoroughly before operating the air-conditioner unit.
1. Safety precautions

Before operating the unit, make sure you read all the “Safety precautions”.
“Safety precautions” list important points about safety. Please be sure to follow them.

Symbols used in the text

⚠️ Warning:  Describes precautions that should be observed to avoid the risk of injury or death to the user.
⚠️ Caution:  Describes precautions that should be observed to prevent damage to the unit.

Symbols used in the illustrations

⚠️ Indicates an action that must be avoided.
⚠️ Indicates that important instructions must be followed.
⚠️ Indicates a part which must be grounded.
⚠️ Beware of electric shock. (Color: yellow)

⚠️ Warning:  Carefully read the labels affixed to the main unit.

1.1. Installation

After you have read this manual, keep it and the Installation Manual in a safe place for easy reference whenever a question arises. If the unit is going to be operated by another person, make sure that this manual is given to him or her.

⚠️ Warning:  The unit should not be installed by the user. Ask the dealer or an authorized company to install the unit. If the unit is installed improperly, water leakage, electric shock or fire may result.

- Use only accessories authorized by Mitsubishi Electric and ask your dealer or an authorized company to install them. If accessories are installed improperly, water leakage, electric shock or fire may result.
- The Installation Manual describes the suggested installation method. Any structural alteration necessary for installation must comply with local building code requirements.
- Never repair the unit or transfer it to another site by yourself. If repair is performed improperly, water leakage, electric shock or fire may result. If you need to have the unit repaired or moved, consult your dealer.
- The appliance is not intended for use by young children or infirm persons without supervision.
- Young children should be supervised to ensure that they do not play with the appliance.

1) Outdoor unit

⚠️ Warning:  The outdoor unit must be installed on a stable, level surface in a place where there is no accumulation of snow, leaves, or rubbishes.
- Do not stand on, or place any items on the unit. You may fall down or the item may fall, causing injury.

⚠️ Caution:  The outdoor unit should be installed in a location where air and noise emitted by the unit will not disturb the neighbours.

2) Indoor unit

⚠️ Warning:  The indoor unit should be securely installed. If the unit is loosely mounted, it may fall, causing injury.

3) Remote controller

⚠️ Warning:  The remote controller should be installed in such a way that children cannot play with it.

4) Drain hose

⚠️ Caution:  Make sure that the drain hose is installed so that drainage can go ahead smoothly. Incorrect installation may result in water leakage, causing damage to furniture.

5) Power line, fuse or circuit breaker

⚠️ Warning:  Make sure that the unit is powered by a dedicated line. Other appliances connected to the same line could cause an overload.
- Make sure that there is a main power switch. Be sure to adhere to the unit’s voltage and fuse or circuit breaker ratings. Never use a piece of wire or a fuse with a higher rating than the one specified.

6) Grounding

⚠️ Caution:  The unit must be properly grounded. Never connect the grounding wire to a gas pipe, water pipe, lightning conductor or telephone grounding wire. If the unit is not grounded properly, electric shock may result.
- Check frequently that the ground wire from the outdoor unit is properly connected to both the unit's ground terminal and the grounding electrode.

1.2. During operation

⚠️ Caution:  Do not use any sharp object to push the buttons, as this may damage the remote controller.
- Do not twist or tug on the remote controller cord as this may damage the remote controller and cause malfunction.
- Never remove the upper case of the remote controller. It is dangerous to remove the upper case of the remote controller and touch the printed circuit boards inside. Doing so can result in fire and failure.
- Never wipe the remote controller with benzene, thinner, chemical reagents, etc. Doing so can result in discoloration and failure. To remove heavy stains, soak a cloth in neutral detergent mixed with water, wring it out thoroughly, wipe the stains off, and wipe again with a dry cloth.
- Never block or cover the indoor or outdoor unit's intakes or outlets. Tall items of furniture underneath the indoor unit, or bulky items such as large boxes placed close to the outdoor unit will reduce the unit's efficiency.

⚠️ Warning:  Do not splash water over the unit and do not touch the unit with wet hands. An electric shock may result.
- Do not spray combustible gas close to the unit. Fire may result.
- Do not place a gas heater or any other open-flame appliance where it will be exposed to the air discharged from the unit. Incomplete combustion may result.

⚠️ Warning:  Do not remove the front panel or the fan guard from the outdoor unit when it is running. You could be injured if you touch rotating, hot or high-voltage parts.
- Never insert fingers, sticks etc. into the intakes or outlets, otherwise injury may result, since the fan inside the unit revolves at high speed. Exercise particular care when children are present.
When the air conditioner is not to be used for a long time

- If the air conditioner is not to be used for a long time due to a seasonal change, etc., run it for 4-5 hours with the air blowing in until the inside is completely dry. Failing to do so can result in the growth of unhygienic, unhealthy mold in scattered areas throughout the room.
- When it is not to be used for an extended time, keep the power supply turned OFF. If the power supply is kept on, several watts or several tens of watts will be wasted. Also, the accumulation of dust, etc., can result in fire.
- Keep the power switched ON for more than 12 hours before starting operation. Do not turn the power supply OFF during seasons of heavy use. Doing so can result in failure.

1.3. Disposing of the unit

⚠️ Warning:
When you need to dispose of the unit, consult your dealer. If pipes are removed incorrectly, refrigerant (fluorocarbon gas) may blow out and come into contact with your skin, causing injury. Releasing refrigerant into the atmosphere also damages the environment.

2. Names and functions of various parts

Indoor unit
- Air inlet: This picks up the ambient air.
- Filter: The filter inside the unit as standard is a simple filter to remove visible dust and dirt. If air particulate is one of the conditions required for use, consult with your dealer. (For details on how to clean, refer to page E.)
- Air outlet: Blows the air back out into the room.

PEH-MYB series
[Celing concealed type]

[Fig. 2.1.2] (P2)

Remote controller
- Check out your remote controller.
Different controllers are used for different systems.
[Fig. 2.1.2] (P2)

3. Operation

Cooling
The air conditioner works to cool the room to the selected temperature. The fan blows air continuously at the selected speed.

Drying (dehumidifying) Disabled in the heating mode
The drying mode efficiently reduces the humidity in the room so that the room temperature is not lowered excessively. When the selected room temperature is reached in the Low setting, the airflow will stop for ten minutes and then will resume for three minutes to keep the humidity low.

Heating
- The air conditioner works to heat the room to the selected temperature.

When selecting the heating mode, a desired room temperature must be set to avoid any cool air. The fan will gradually increase the airflow delivery up to a selected rate.
- When the room temperature reaches the selected temperature and the compressor stops, the fan will deliver a gentle airflow.

Automatic (cooling/ heating)
The air conditioner automatically goes into the cooling or heating mode to keep the room at the selected temperature.

Ventilation
- Ventilation will not be displayed when not available (settings cannot be specified).
- When ventilation is selected it will operate in all modes.
Note: The airflow settings cannot be changed on the main unit.
Before starting operation

- Start running after the "ON" display has disappeared. The "ON" display briefly appears on the room temperature display (max 3 minutes) when the power is turned on and after a power failure. This does not indicate any failure of the air conditioner.

- During heating operation, even if the indoor unit is set to operation while the outdoor unit is in defrosting operation, operation starts after the defrosting operation of the outdoor unit has ended.

3.1. ON/OFF

Start an operation
1. Press the [ON/OFF] button
   Operation lamp [○] lights up and operation starts.

Stop an operation
1. Press the [ON/OFF] button again
   Operation lamp goes off and operation stops.
   • Once the buttons have been set, pressing of the [ON/OFF] button only can repeat the same operation thereafter.
   • During operation, the operation lamp above the [ON/OFF] button lights up.

3.2. Selecting operation

When selecting operation:
1. Press the [selecting operation] button.
   Choose the operation mode by pressing the [selecting operation] button, and confirm the selected operation by pressing the [ON/OFF] button.

For cooling:
- Press the [selecting operation] button and turn on the "AUTO" display.

For dry:
- Press the [selecting operation] button and turn on the "DROPS" display.

Caution:
- Never expose your body directly to cool air for a long time. Excessive exposure to cool air is bad for your health, and should therefore be avoided.

Dry operation:
- The dryer is a microcomputer-controlled dehumidifying operation which controls excessive air-cooling according to the room temperature of your choice. (Not usable for heating.)
  1. Until reaching room temperature of your choice
     The compressor and indoor fan function in still motion according to the change of the room temperature and automatically repeat ON/OFF.
  2. When reaching room temperature of your choice
     Both the compressor and indoor fan stop.

When stop continues for 10 minutes, the compressor and indoor fan are operated for 3 minutes to keep the humidity low.
For heating
Press the [selecting operation] button to bring up the "C°" display.
Regarding displays during heating operation "DEFROST"
Displayed only during the defrosting operation.

"STAND BY"
Displayed from the start of heating operation until the moment warm air blows out.

⚠️ Caution:
- When the air conditioner is used together with burners, thoroughly ventilate the area. Insufficient ventilation can result in accidents due to oxygen deficiency.
- Never place a burner at a place where it is exposed to the airflow from the air conditioner.
- Doing so can result in imperfect combustion of the burner.
- The microcomputer functions in the following cases:
  - Air does not blow out when heating starts.
  - To prevent any cool air from escaping.
  - Wait a moment until the airflow comes out naturally.

For ventilation
Press the operation mode ([1] [2] [3] [4] [5] [6] [7] [8]) button and select the ventilation mode "SEC".

- Used to provide ventilation without using the hear or air conditioning functions of the unit.
- The "SEC" display will not appear when the ventilation equipment is not attached.

3.3. Room temperature adjustment
To change room temperature
Press the [room temperature adjustment] button and set the room temperature of your choice.
Pressing [C°] or [C°] once changes the setting by 1°C. If the pressing is continued, the setting continues to change by 1°C.
- Indoor temperature can be set within the following range:
  - Cooling/dry: 18 - 30°C
  - Heating: 17 - 28°C
- It is impossible to set the room temperature by the air-blow operation.
- The range of room temperature display is 8 - 35°C. Outside this range, the display flashes either 9 - 30°C or 35°C to inform you if the room temperature is lower or higher than the displayed temperature.

3.4. Fan speed adjustment
To change fan speed
Every time you press the [fan speed] button once, it switches from the low-speed to high-speed settings successively (7, 8H only)

In the electronics dry operation, indoor fan automatically turns to low-speed operation (7, 8H only). Switching of fan speed is impossible. (Only the display on the remote controller changes.)
- Every time the fan speed adjustment button is once pressed, the fan speed is changed. (7, 8H only)
  - Display: (Low) → (High)

3.5. Time setting
- Set the current time after turning ON the power of the air conditioner or after restoration from a power failure.
- It can be set regardless of the operation of the indoor unit.
- During the time operation, the time-setting button becomes void, disabling time setting.
1. Press the [time selection] button and bring up the [current time] display
2. Every time it is pressed, the display changes.
   - CLOCK (current time) → (timer start time) → (timer end time) → (no display)

⚠️ Caution:
When the current time is not yet set, the "CLOCK (current time)" display flashes, disabling the setting of timer operation.
2. Set the current time by pressing the [C°] or [C°] button
- The time cannot be set while the [C°] timer on/off is displayed.
- While the "C°" CLOCK time is displayed, press the time setting [C°] [C°] [C°] button and set the time.
  - The setting advances one minute every time the [C°] button is pressed once, and retrogresses one minute every time the [C°] button is pressed once.
  - When respective [C°] [C°] [C°] buttons are pressed continuously, the time display goes fast forward. It advances in the order of one minute - 10 minute unit - one hour unit.
  - About 10 seconds after the button operation has been completed, the [C°] current time and [C°] "CLOCK" display disappears.

⚠️ Caution:
Remote controller is equipped with a simplified clock with a precision of about + - 1 minute per month.
- The time must be readjusted (reset) every time the air conditioner is subjected to a power stop of the air conditioner or a power failure.

3.6. Timer setting
If the timer is set, the unit starts (stops) at the set time, and the time mode is terminated.
- When you wish to confirm the starting and ending time, press the [time selection] button while [C°] [C°] is displayed.

Function of timer
On-timer
Set the on-timer for the time the working day begins in your company.
When the set start time arrives, the air conditioner starts operation.
Off-timer
Use the off-timer as a reminder to turn off the air conditioner. When the set end-time arrives, the air conditioner stops operation.
- There are three methods for using the timer.
  1. ON/OFF Timer: When setting both starting and ending time
  2. On-timer: When only setting the starting time (Ending time is set to "--:--")
  3. Off-timer: When only setting the ending time (Starting time is set to "--:--")

Display example of timer setting

The example shows a timer set for operation start at 16:00 and end at 17:00.
1. Press the [timer/continuous] button and bring up the [no display]
2. Press the [time selection] button and bring up the [timer start time] display
3. Press the [C°] [C°] button of the [time selection] and set the starting time
   - When using it as an off-timer, set the starting time to "--:--".
   - The "--:--" is displayed next to 23:30.
4. Press the [time selection] button and bring up the [timer end time] display
5. Press the [C°] [C°] button of the [time switch] and set the ending time
   - When using it as an on-timer, set the ending time to "--:--".
   - The "--:--" is displayed next to 23:30.
6. Press the [timer/continuous] button and bring up the [C°] [C°] display

Bringing up the C° display complements the setting.
Every time the button of the button at the timer selection is pressed once, it advances or retrogresses by 10 minutes.

1. Press the button and then set the remaining time.
2. Press the button to set the remaining time.
3. Press the button to set the remaining time.

3.7. Others

- CENTRAL CONTROL

<table>

FILTER

4. The smart way to use

Even minimal steps can help make the use more effective in terms of air-conditioning effect, electricity charges, etc.

at the right room temperature

- In cooling operation, a temperature difference of about 3°C between indoors and outdoors is optimum.
- If the room temperature is raised by 1°C during air-conditioning operation, about 10% electric power can be saved.
- Excessive cooling is bad for health, it also results in the waste of electric power.

Clean the filter thoroughly

- If the screen of the air filter becomes clogged, the airflow and air-conditioning effect can be significantly reduced. Further, if the condition is left unattended, failure can result. It is particularly important to clean the filter at the beginning of the cooling and heating seasons. (When profuse dust and dirt have accumulated, clean the filter thoroughly.)

5. Caring for the machine

Before care-taking, turn the power supply OFF.

Caution:

- Before you start cleaning, stop operation and turn OFF the power supply.
- Remember that the fan is rotating inside at high speed, posing a serious risk of injury.
- Indoor units are equipped with filters to remove the dust from sucked-in air.
- Clean the filters using the methods shown in the following sketches. (The standard filter should normally be cleaned once a week, and the long-life filter at the beginning of each season.)

How to clean

- Clear dust away lightly or clean it up with a vacuum cleaner. In the case of severe staining, wash the filter in lukewarm water mixed with dissolved neutral detergent or water, and then rinse off the detergent completely. After washing, dry the filter and fix it back into place.

Caution:

- Do not dry the filter by exposing it to direct sunlight or warming it using a hot object. Doing so can result in the deformation of the filter.
- Washing it in hot water (more than 60 degree C) can also result in deformation.

Prevent intrusion of heat curing air-cooling

- To prevent the intrusion of heat during cooling operation, provide a curtain or a blind on the window to block out direct sunlight. Also, do not open the entrance or exit except in cases of dire necessity.

Carry out ventilation sometimes

- Since the air periodically gets dirty in a room that is kept closed for a long time, ventilation is sometimes necessary. When gas appliances are used together with the air conditioner, special precautions must be taken. If the "OSS NAV" ventilation unit developed by our company is used, you can perform ventilation with less waste. For details on this unit, consult with your dealer.

Caution:

Never pour water or flammable sprays onto the air conditioner. Cleaning using these methods can result in the failure of the air conditioner, electric shock, or fire.

Replacement of filter

[Fig. 5.2.1] (P2)

- Air inlet
- Air filter
- Air filter handle

(1) The air filter is located at the air inlet (rear side of the unit).
(2) Lift the air filter handle and pull the filter towards you.
(3) If you are going to use an air inlet conduit, remove the air filter. In this case, an air filter must be prepared locally and installed at the intake grille.
6. Troubleshooting

Before you call out a repairman, check the following table to see whether there is a simple solution to your problem.

- Unit does not cool or heat well.
  - Clean the filter. (Dust and debris that collects in the filter will decrease airflow.)
  - Check the temperature setting and adjust it if necessary.
  - Increase the space surrounding the outdoor unit.
  - Is the air intake or air outlet blocked?
  - Is a window or door open?

- The unit does not blow air out right away in the heating mode.
  - The unit is preparing to deliver warm air.

- The unit stops operating before arriving at the set temperature in the heating mode.
  - Frost forms when the outdoor temperature is low and humidity is high. Wait for about 10 minutes for the frost to melt.

- There is a "swishing" noise that occurs from the unit when water flows.
  - This sound is made when refrigerant inside of the unit is flowing or melting.

- A ticking noise is heard from inside of the unit.
  - This sound is made when internal parts of the unit expand or contract when the temperature changes.

- An odor is detected in the room.
  - This is caused when the unit expels odors that have been absorbed from the walls, carpets, furniture or clothing.

- A white mist is expelled from the indoor unit.
  - This may occur just after the unit is turned on when a high level of humidity is present in the room.

- Water or moisture is expelled from the outdoor unit.
  - This occurs to expel water or moisture that may have collected in the pipes or around piping fixtures.
  - This occurs to dispel water from the heat exchanger.

- The indicators of the remote controller do not light up when operated.
  - Turn on the power switch, * will be displayed.

- CENTRALLY CONTROLLED is displayed in the remote controller.
  - The start and stop functions of the remote controller are not available when the CENTRALLY CONTROLLED message is lit.

- The start and stop functions are not available just after restarting the unit.
  - Wait about three minutes (operation has stopped to prevent damage to the air conditioner).

- The unit started even though the start/stop button was not pushed.
  - Is the timer on?
  - Press the start/stop button to stop the unit.
  - Was a distant command sent from the remote controller?
  - Is the CENTRALLY CONTROLLED message lit?
  - Find out if the remote controller was used.
  - Is the automatic (cooling/heating) mode selected?
  - Press the start/stop button to stop the unit.

- The unit stopped even though the start/stop button was not pushed.
  - Is the timer on?
  - Press the start/stop button to restart the unit.
  - Was a distant command sent from the remote controller?
  - Is the CENTRALLY CONTROLLED message lit?
  - Find out if the remote controller was used.

- The remote controller's timer cannot be set.
  - Set the schedule timer if one is connected.

- "HO" is displayed in the remote controller.
  - An automatic startup test is being performed (will last for about two minutes).

- An error code is displayed in the remote controller.
  - A self-diagnostic function is being performed to preserve the air conditioner.
  - Do not attempt to make repairs yourself. Turn the main switch off and contact the dealer from whom you bought the air conditioner. Provide him or her with the name of the unit and the information displayed in the remote controller.

- No display appears on the wireless remote controller. Signals are not received by the thin sensor unless sent from close up.
  - The batteries are becoming weak.
  - Replace the batteries and press the reset button.
  - If the display does not appear after replacing the batteries, make sure that the (+) and (-) of the (-) cells are aligned correctly.

- The operating display of the wireless remote controller's receiver is flashing.
  - A self-diagnostic function is being performed to preserve the air conditioner.
  - Do not attempt to make repairs yourself. Turn the main switch off and contact the dealer from whom you bought the air conditioner. Provide him or her with the name of the unit.

7. Installation and transferring works, and checking

Regarding place for installation
Consult with your dealer for details on installation and transferring the installation.

⚠️ Caution:
Never install the air conditioner where there is a risk of leakage of flammable gas.

If gas leaks and accumulates around the unit, fire can result.

Never install the air conditioner at the following place:
- where there is much machinery oil
- near ocean or beach areas where there is much salt
- where humidity is high
- where there are hot springs nearby
- where there is much sulfuric gas
- where there is a high-frequency processing machinery (a high-frequency welder, etc.)
- where acid solution is frequently used
- where special sprays are frequently used
- Install the indoor unit horizontally. Otherwise, water leakage can result.
- Take sufficient measures against noise when installing the air conditioners at hospitals or communication-related businesses.

If the air conditioner is used in any of the above-mentioned environments, frequent operational failure can be expected. It is advisable to avoid these types of installation sites. For further details, consult with your dealer.

Regarding electrical work

⚠️ Caution:
- The electrical work must be undertaken by a person who is qualified as an electrician according to the technical standard respecting electrical installation, [Indian wire specifications], and the installation instruction manual with the absolute use of exclusive circuits. The use of other products with the power source can result in burnt-out breakers and fuses.
- Never connect the grounding wire to a gas pipe, water pipe, arborist, or telephone grounding wire. For details, consult with your dealer.
- In some types of installation sites, the installation of an earth leakage breaker is mandatory. For details, consult with your dealer.

Regarding transfer of installation
- When moving or reinstalling the air conditioner when you enlarge your home, remodel, or move, consult with your dealer in advance to ascertain the cost of the professional engineering work required for transferring the installation.

⚠️ Caution:
When moving or reinstalling the air conditioner, consult with your dealer. Defective installation can result in electric shock, fire, etc.

Regarding noise
- In installing work, choose a place that can fully bear the weight of the air conditioner, and where noise and vibration can be reduced.
- Choose a place where cool air or warm air and noise from the outdoor air outlet of the air conditioner do not inconvenience the neighbors.
- If any electric object is placed near the outdoor air outlet of the air conditioner, decreased performance and increased noise can result. Avoid placing any obstacles adjacent to the air outlet.
- If the air conditioner produces any abnormal sound, consult with your dealer.
